

Enhanced Solar Thermal Energy Systems (ESTES)

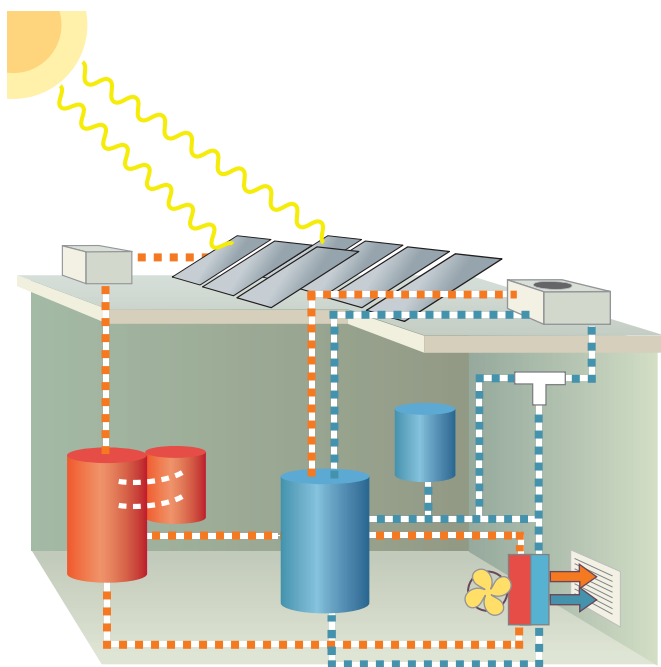

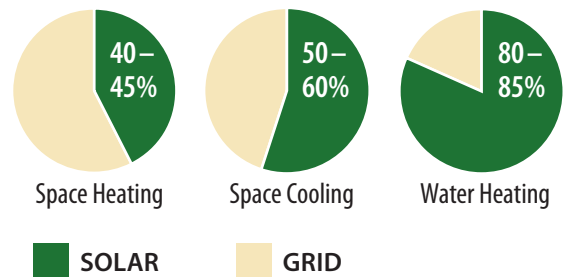

RainTree's Enhanced Solar Thermal Energy Systems tap the sun's power to provide efficient heating, cooling and hot water. Through fewer moving parts and quality engineering there are little or no maintenance costs as compared to traditional HVAC systems. RainTree's ESTES easily integrates with existing duct work and HVAC systems. Attractive tax credits, local and state incentives and accelerated depreciation give these systems a rapid return on investment. They are cost competitive from day one with conventional systems and provide energy savings immediately while using clean, renewable energy for a large portion of your needs. All this allows you to achieve cost reductions and green business initiatives simultaneously. Our solar thermal energy systems are certified through the Solar Rating and Certification Corporation.

ESTES is just one of the new innovations RainTree Power is offering in our efforts to bring clean, renewable energy production to commercial, industrial and governmental interests throughout North America.

RTP's Enhanced Solar Thermal Energy Systems harness the sun's energy to:

- heat buildings in the winter,
- cool buildings in the summer,
- supply hot water (in very large volume if desired),
- integrate seamlessly with existing HVAC systems, and
- reduce your HVAC and hot water energy and maintenance costs.

SOLAR THERMAL EFFICIENCY

Company Overview

RainTree Power deploys tailored, turnkey renewable energy systems. We offer an array of purchase and lease options to fit your business needs. From outright purchase of complete, installed and operating systems to long-term Power Purchase Agreements where RainTree will design, build, install, maintain and operate your system often at little or no upfront cost to you. RainTree Power makes it simple...

We analyze each of your locations and design efficient clean energy systems tailored for your specific needs. Each system is custom built, packaged and shipped to each location as installations are scheduled. Our professional technicians assemble and install each system and bring it into service. When desired, RainTree will maintain and operate all of your clean energy systems while you pay only for the power you use.

Solar thermal panels allow RainTree's ESTES to capture energy directly from the sun.

ESTES uses adsorption chillers to cool indoor space at greatly reduced cost.

Installing clean, green energy systems provides your business with substantial value in marketing and public relations. With RainTree Power you can achieve corporate initiatives for reducing costs *and* carbon footprint at the same time. Our easy, one stop shopping provides the easiest, best and most cost effective renewable energy production systems available today.

RainTree Power — your clean, green renewable energy provider.

Call us today to see if you qualify for a RainTree Power Energy System.
